

# Seismic Vulnerability Map

## Seismic intensity in Mitoyo City

### Safety measures inside the house

#### ● Fall prevention of furniture

Fix tall furniture with L-shaped brackets. Since two-tiered or stacked furniture is particularly prone to fall, connect with flat fittings.

Apply a tension pole between the ceiling and furniture. Insert a fall prevention plate, etc. under furniture and fix it so that it rests on the wall and pillar.

#### ● Safe furniture layout

When placing furniture in a sleeping room, arrange it so that it will not fall on your body.

#### ● Window panes

Check them for cracks and loose window frames, and attach glass protective films or rain door.

### Safety measures outside the house

#### ● Fences

Do the concrete block fences and gateposts contain reinforcing steel properly?

Is the foundation robust if there is any crack or leaning, repair it.

#### ● Roofs

Aren't there any crack, displacement, peeling, etc.?

Fix the antenna securely.

#### ● Outside walls

Isn't there any crack, corrosion or floating? Repair it, if any.

#### ● Propane gas

Place the gas cylinder on a solid foundation.

Fix the cylinder to the wall surface with chains, etc.
